Improving Chemistry Learning Performance
Dr. Ingrid Ulbrich
Pacific Crest University

As faculty, we often wish that students were better at learning, and especially better at learning chemistry. But what do they really need, and how do we give it to them? What are the barriers that are impeding their performance, and how do we mitigate them? In this interactive session, we'll explore common student risk factors, characteristics of quality collegiate learners, learning skills that support effective chemistry learners. A course that integrated learning to learn and POGIL chemistry will be shared as a model for improving chemistry learning performance.
